

The F series speakers are suitable for all applications where highly precise and broadband sound transmission down to low frequencies is required. This makes perfect integration easy and opens up many application possibilities in the field of corporate events, trade fairs and product presentations, press conferences, in conference rooms and lecture halls, in theaters, concert halls and cinemas as well as in sports halls and fitness centers. If the speakers are supported by subwoofers, concert levels are also possible. The arrangement of the components ensures good focusing to optimize speech intelligibility. All models feature newly developed top-class components to achieve the best possible sound quality and defined dispersion characteristics.
